WorldSkills Occupational Standards

creative arts and fashion Jewellery

WorldSkills Occupational Standards (WSOS)

General notes on the WSOS

The WSOS specifies the knowledge, understanding, and specific skills that underpin international best practice in technical and vocational performance. It should reflect a shared global understanding of what the associated work role(s) or occupation(s) represent for industry and business (www.worldskills.org/WSOS).

The skill competition is intended to reflect international best practice as described by the WSOS, and to the extent that it is able to. The Standard is therefore a guide to the required training and preparation for the skill competition.

In the skill competition the assessment of knowledge and understanding will take place through the assessment of performance. There will only be separate tests of knowledge and understanding where there is an overwhelming reason for these.

The Standard is divided into distinct sections with headings and reference numbers added.

Each section is assigned a percentage of the total marks to indicate its relative importance within the Standards. This is often referred to as the "weighting". The sum of all the percentage marks is 100. The weightings determine the distribution of marks within the Marking Scheme.

Through the Test Project, the Marking Scheme will assess only those skills that are set out in the Standards Specification. They will reflect the Standards as comprehensively as possible within the constraints of the skill competition.

The Marking Scheme will follow the allocation of marks within the Standards to the extent practically possible. A variation of up to five percent is allowed, provided that this does not distort the weightings assigned by the Standards.

WorldSkills Occupational Standards

Section		Relative importance (%)
1	Work organization and management	20
	The individual needs to know and understand:	

- Procedures for checking and maintaining individual specialist tools and shared workshop tools and machines
 Safe operation and maintanance of shared workshop machines and
- Safe operation and maintenance of shared workshop machines and individual tools
- Procedures for the secure storage of jewellery and materials
- Risks attached to the use of natural and propane gas, oxygen, electricity, acid, and chemical products
- Legislation and best practice relating to health and safety
- Legislation and regulations regarding the purchase, production and sale of precious metals, gemstones and finished pieces
- The history and tradition of specialist jewellery making techniques used in past periods and in different countries
- Specialist terminology relating to precious metals and jewellery making
- Out-sourcing practices to external contractors for the purposes of electroplating and the electro-plating process, gemstone mounting and the gemstone mounting process.

The individual shall be able to:

- Provide expert advice and guidance on jewellery manufacturing techniques for a specific design proposal
- Assess and plan for the separate tasks and operations necessary for the manufacture or repair of jewellery components and assembly of completed jewellery pieces
- Accurately interpret proposals for manufacture of jewellery components or complete jewellery pieces including:
 - Technical drawings
 - Sample pieces
 - Sketches or rendered images from 3D digital models
- Interpret technical terminology and symbols
- Determine time, materials, and equipment necessary to complete projects
- Work with a high degree of accuracy and precision on fine and delicate pieces
- Apply correct procedures for reduction of wastage and retention of precious metal filings for re-use
- Comply with the health and safety regulations and procedures of the country or region where working
- Use personal protective equipment (PPE) and clothing sturdy enough to protect the user from small pieces of flying or incandescent metal
- Operate machinery and tools in a manner that avoids risk to him/herself or others within the workshop
- Proactively maintain continuous professional development in order to aware of fashion trends in jewellery design, specialist manufacturing techniques and developments in technology

- Document and maintain design processes, features, and design development notes
- Produce basic form drawings/sketches that accurately reflect the design concept

Section Relative importance (%) • Use balance, proportion, highlights, shadowing, texturing effects appropriately • Use balance, proportion, highlights, shadowing, texturing effects

- Select technologies suitable for the manufacture of items
- communicate ideas and information to enable confirmation of work requirements and specifications
- use mathematical ideas and techniques to complete measurements, calculate area and volume, and estimate other material requirements
- use workplace technology, including calculators, measuring, and recording devices, and computing equipment
- Use callouts on the design page to quickly and efficiently communicate design intent and thought process

3 Manufacture of precious metal alloys

5

The individual needs to know and understand:

- The content of precious metal alloys and the impact that additives have on the precious metal in terms of colour, pliability, and durability
- How alloys react to various processes used by the jewellery maker
- The properties of precious metal alloys and their solders
- Laws and regulations relating to precious metal content for sale and export
- Assaying processes and procedures for the country of operation, purchase, and sale of jewellery products
- Assaying marks delineating precious metal quality
- Forms in which precious metals are sold, such as sheet/wire/granules etc.

The individual shall be able to:

- Recognize authenticity and quality signs for precious metals
- Source precious metals of the correct price and quality for jewellery manufacture
- Calculate the proportions and quantities of fine precious metals and base metals required for any predetermined amount of any recognized precious metal alloy
- Cast precious metal alloy ingots and bars of any predetermined weight, with a minimum of residual impurities, ready to be milled or rolled in preparation for the manufacture of jewellery components

Section		
Preparation of precious metal alloys for the manufacture of jewellery components	10	
The individual needs to know and understand:		
 Properties and applications of various recognized precious metal alloys Procedures for the transformation of precious metal alloy ingots in preparation for the manufacture of jewellery components Applications and uses for different recognized precious metals 		
The individual shall be able to:		
 Manufacture precious metal sheet or square wire, and reduce to any pre- determined thickness using manual or electrically powered rolling mills Manufacture and reduce the thickness of square or round wire in precious metal alloys to any pre-determined dimensions using drawing banks Manufacture round wire from square wire, and reduce to any pre- determined diameter using a drawing bank 		
Manufacture of both simple and complex jewellery components	30	
The individual needs to know and understand:		
 Various jewellery components and their uses Techniques and methods for forming and constructing components and methods for finishing components A sufficient understanding of gemstone setting to ensure the successful seating and setting of a gemstone by a professional gem setter The correct and safe use of solders and soldering torches Other techniques used in the joining of one or more components to create a completed piece 		
The individual shall be able to:		
 Manufacture Chenier/tubes and reduce to any predetermined diameters using a drawing bank Transform precious metal alloy sheet, wire or Chenier/tube into simple jewellery components employing bending, shaping, and forming to conform to any shape pre-determined by technical drawing or sample component Drill precious metals accurately to conform to any shape pre-determined by technical drawings or sample component Transform simple jewellery components employing abrasive techniques such as milling, grinding, filing, ajour-sawing etc. to conform to any shape pre-determined by technical drawings or sample components Hammer, emboss, shape or dome precious metal sheets of appropriate thickness into low relief, to conform to any shapes pre-determined by technical drawings or sample components using appropriate doming tools 		
	Preparation of precious metal alloys for the manufacture of jewellery components The individual needs to know and understand: • Properties and applications of various recognized precious metal alloys • Procedures for the transformation of precious metal alloy ingots in preparation for the manufacture of jewellery components • Applications and uses for different recognized precious metals The individual shall be able to: • Manufacture precious metal sheet or square wire, and reduce to any predetermined thickness using manual or electrically powered rolling mills • Manufacture and reduce the thickness of square or round wire in precious metal alloys to any pre-determined dimensions using drawing banks • Manufacture round wire from square wire, and reduce to any predetermined diameter using a drawing bank • Manufacture of both simple and complex jewellery components The individual needs to know and understand: • Various jewellery components and their uses • Techniques and methods for forming and constructing components and methods for finishing components • A sufficient understanding of gemstone by a professional gem setter • The correct and safe use of solders and soldering torches • Other techniques used in the joining of one or more components to create a completed piece The individual shall be able to: • Manufacture Chenier/tubes and reduce to any predetermined diameters using a drawing bank <t< td=""></t<>	

Section Relative importance (%) Manufacture functioning mechanisms for jewellery such as hinges, clasps, articulations, pressure snaps riveting and screw threads as determined by technical drawings or sample components, or of their own design. Ensure that manufactured functioning components can withstand constant use without sacrificing any mechanical properties. Assemble basic jewellery components and complex jewellery components into completed jewellery pieces by means of precious metal solder joins to conform to any designs pre-determined by technical drawing or sample components Repair damaged or worn pieces of jewellery so that the restored pieces will be indistinguishable from their original aspect at the time of manufacture Surface finish 6 15 The individual needs to know and understand: Skill specific finishing and polishing methods and techniques • The effect of different types and grades of polishing media on the surface • finish Procedures, tools, and techniques to gain the optimum surface finish Common surface imperfections and defects and appropriate methods for their repair International grades of sandpaper used in surface finishing • The individual shall be able to: • Avoid creating marks, scratches, and surface imperfections throughout all stages of manufacture of simple and complex jewellery components and completed jewellery pieces before the application of final surface finishes Finish surfaces at stages throughout the manufacturing process Apply non-reflective 800ASA sandpaper (or equivalent) appropriate for critical evaluation and/or passing on to any subsequent phases of production requiring other jewellery' industry skills, such as casting, gemsetting, engraving, and polishing Total 100

References for industry consultation

WorldSkills is committed to ensuring that the WorldSkills Occupational Standards fully reflect the dynamism of internationally recognized best practice in industry and business. To do this WorldSkills approaches a number of organizations across the world that can offer feedback on the draft Description of the Associated Role and WorldSkills Occupational Standards on a two-yearly cycle.

In parallel to this, WSI consults three international occupational classifications and databases:

- ISCO-08: (http://www.ilo.org/public/english/bureau/stat/isco/isco08/) ILO 7313
- ESCO: (https://ec.europa.eu/esco/portal/home)
- O*NET OnLine (<u>www.**onet**online.org/</u>)

This WSOS appears most closely to relate to the occupation of *Jeweller* (which is rather higher): <u>https://www.onetonline.org/link/summary/51-9071.01</u>

and the occupation of *Jeweller* here, which may be a closer fit: <u>http://data.europa.eu/esco/occupation/618a854a-4ecd-4535-84e6-350e1fe0aa0f</u>

Adjacent occupations may also be explored through these links.

The following table indicates which organizations were approached and provided valuable feedback for the Description of the Associated Role and WorldSkills Occupational Standards in place for WorldSkills Shanghai 2021.

Organization	Contact name
Cartier London (United Kingdom)	Neil Battes, Jewellery workshop manager
C Rempel Joias Ltda (Brazil)	Claudinei Rempel, Director
David Yurman (Global)	Ella Kingston, Assistant Designer/Coordinator High Jewellery/Bridal/Artist Series/Custom Work
Jewellers Association of Australia (Australia)	Megan Young, Administrations, Marketing and Membership Executive
LCC: Sharonov's Academy of Jewellery Arts (Russia)	Diana Tabachkova, Chief Executive Officer
The Goldsmith Centre (United Kingdom)	Robin Kyte, Education and Training Consultant
Vummidi Bangaru Jewellers (India)	Mr. Anupam Karmakar, Creative Head
